Product:

Raindrain with galvanized steel slotted grates

When the volunteer group responsible for the Compassion Center at College Park decided to upgrade the outside areas of the Center building their research indicated that Raindrain was the right product for the surface drainage.

The rigid, polymer concrete, bodied Raindrain, complete with boltless locking galvanized slotted grates

was ideal to provide the delineation line between the brick paved areas and the asphalt parking lot.

The clean smooth edge of the Raindrain was essential to lay the brick pavers up against.
